MASS SPECTRUM

ESI + mode, MS1 centroid Charge states confirmed **6**

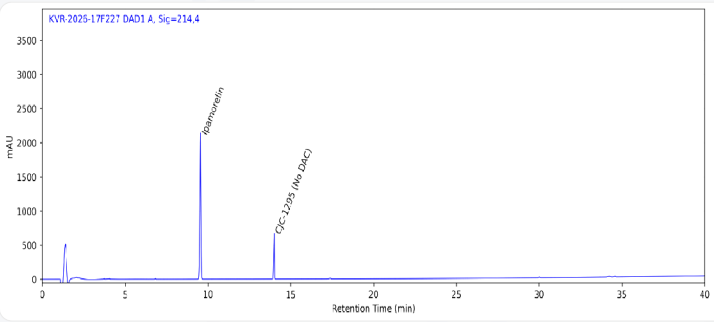

CJC-1295 (No DAC) 5 ions **Ipamorelin** 1 ion

Each coloured stick is a confirmed charge state of the compound(s) above, drawn at the intensity measured for that ion. Height is relative to the strongest confirmed ion and is not proportional to concentration; content is reported in the Test Results above. The 1 grey stick(s) are the same compound's own in-source fragment and multimer ions, labelled by species: they are produced from the analyte in the ion source and are not separate substances in the vial.

CLIENT & SAMPLE INFORMATION

Client	Grey Axis Research, LLC	**Sample Name**	CJC-1295 (No DAC)/Ipamorelin
Lot Number	GX-CP10-US1126	**Sample Matrix**	Lyophilized Powder
Date Received	10/31/2026	**Certified Date**	11/02/2026

TEST METHODOLOGY

RAPID STERILITY SCREENING METHOD

Sample is reconstituted and incubated in growth media under controlled conditions. Cultures are monitored for microbial growth over the incubation period. This rapid screening method provides preliminary sterility assessment and is suitable for quality control purposes. For regulatory compliance, full compendial sterility testing may be required.
